

MINIMAX ALGORITHM

Aim

To write a Python program to implement the Minimax Algorithm.

Objective

To find the best move in a game by maximizing the player's score and minimizing the opponent's score.

Algorithm

1. Start.
2. Read the game tree values.
3. Evaluate all possible moves.
4. Choose the maximum value for the player.
5. Choose the minimum value for the opponent.
6. Display the best score.
7. Stop.

Source Code

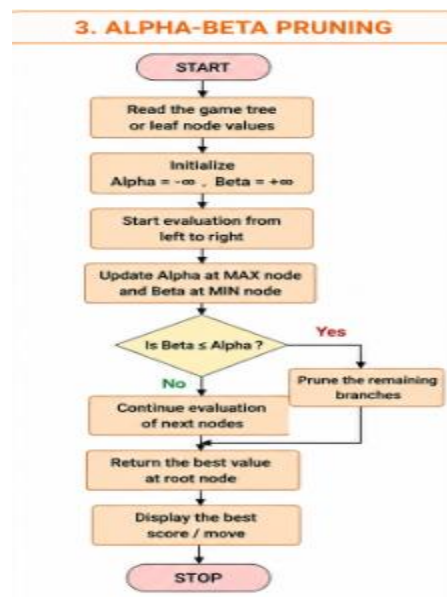

```
scores = [3, 5, 2, 9]
print("Game Scores:", scores)
best = max(scores)
print("Best Score =", best)
```

Sample Output

Game Scores: [3, 5, 2, 9]

Best Score = 9

FLOWCHART:

Result

Thus, the Python program to implement the Minimax Algorithm was executed successfully.
